

# AMX CORNER BAYS

Fitting a corner unit can enable you to display your products in a continuous run of shelving without leaving a gap.

Corner units use standard 1000mm back panels, so if you require perforated or slatted back panels they can be added.

The shelf and base sizes include 250mm, 300mm, 400mm and 500mm.

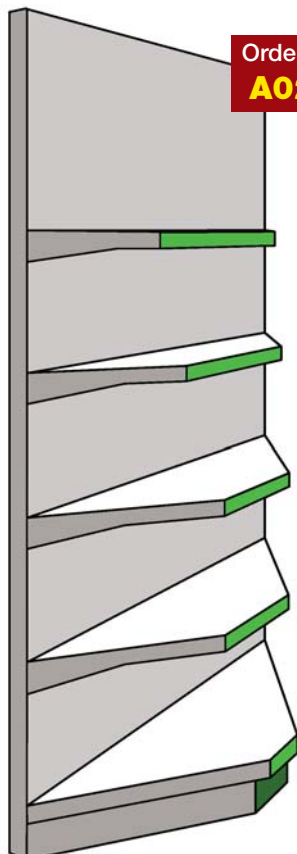

The units can be made to any standard wall upright size.
